Game Information & Overview:

- Lead Designer: Elliot Eismin
- Code/Rules: Tim Sexton (*prior to 0.94 release*), Mike Vinikour (MXV), Joshua Henderson
- Lead Mechanical Engineer: Robert Blakeman
- Artwork: Randy Martinez
- Display and Animations:
- Sound Design: Jerry Thompson
- Release Date: May 2024
- Wiki Rulesheet based on Code Rev: 1.02
- *Edit the Code revision, if applicable, when you make changes*

Following the death of his beloved pet dog Daisy at the hands of a Russian crime family, John Wick comes out of retirement from his old life as a cold-blooded assassin with the sole goal of taking revenge on those who wronged him. Worse comes to

worse when former associates and fellow assassins aim to take John down. With the help of Winston, owner of the New York Continental, and other allies, John must defeat the members of the High Table. ***John Wick*** is the first pinball machine designed by former mechanical engineer Elliot Eismin and takes influence from all four mainline films in the series.

Rules Overview:

- Shoot the weapons case / VUK to light jobs, then VUK to start them. Lit shots during jobs are multiplied by the enemies (blue circles) in front them, which spawn over time as switch hits are made. Increase the number of enemies spawned by hitting orange standup targets and the Red Circle bumper.
 - Each faction has a specific perk given for cashing out their job by making the required shots, then shooting the left eject.
- Light allies by hitting gold coin targets *before starting a job*. Then hit either the left, center, or right ramp to qualify ally for use during the next job.
- Defeat 10 enemies during single-ball play to light the left eject for adversary battle. Adversary battles are single-ball modes with a long ball save.
 - Light the escape jackpot by making lit shots and hitting the blood marker to light the left eject, then either cash out or keep the battle going with increased scoring. Doing well enough in the battle awards “Be Seeing You” for 25M, 10M in end-of-ball bonus, and an extra

ball for the first Be Seeing You in a game.

- Bash the car enough times to light car multiball at left orbit (four for the first multiball on Pro, two on Prem / LE). Default car multiball is helipad showdown, hit car to change the lit multiball.
- Captive ball spells WINSTON to light locks for deconsecrated multiball at the center ramp.
- Shooting the Red Circle bumper & targets near it advance towards lighting excommunicado multiball.
- Play all three multiballs, one job, and one battle to qualify Red Circle Reckoning mini-wizard mode. Play all modes of one type (jobs, battles, and multiballs) to qualify subsequent mini-wizard modes.
- Blood marker (left) standup targets during normal play light outlane ball save.

Premium/LE:

Pro:

Modes of Play:

These modes are accessible by holding both flipper buttons during attract mode until a menu appears. The following options are available:

- **Standard:**

See below for full rulesheet.

- **Competition:**

- **DJ Mixer**

NOT a gameplay mode. This mode operates like a jukebox, allowing you to play the music featured in the machine, including a number of specific playlists.

- **Competition Install**

Not from the gameplay menu, but the following is changed if a Competition Install is performed from the utilities menu:

Skill Shots:

- Plunge the ball into the right VUK for a crate skill shot. Doing this without hitting any switches is the Baba Yaga skill shot which scores 1.5M and immediately starts the lit job, regardless of job progress. Hitting one switch is the super crate skill shot which advances the crate towards lighting job + scores points starting at 750k. Hitting more than one switch awards the crate skill shot which awards points only, starting at 150k. If the VUK is already lit to start a job, then any of the crate skill shots will start it.
- Plunge the ball into the backdoor to the Red Circle club for a VIP skill shot. Starts at 650k + 250k per VIP skill shot. If Excommunicado multiball is lit, this will start the multiball.
- Full plunge and then make the 3-shot combo of right orbit - right ramp - left eject for the MXV skill shot. This scores 10M and adds 10 **enemies** to the next time enemies are

spawned.

- (Prem / LE) Plunge the ball behind the car for a car skill shot. Starts at 850k + 250k per car skill shot and advances the car towards the next car multiball. If the left orbit is already lit for car multiball, this skill shot will only score points.

Jobs:

Shoot the weapons crate or the right VUK to advance the blue lights in front of the crate. Once all three are lit solid, the right VUK will light to start the next job. **Allies** can be used during jobs if qualified by shooting their respective shots.

Each job is timed for 60 seconds, with 3 seconds added for each shot made, and every 4th job having +30 seconds added to the base timer. The timer can also be extended by 30 seconds, once per job, by completing the weapons crate targets and then shooting the right VUK to boost the timer.

There are seven factions to complete jobs for and each of the seven jobs is assigned to one of the factions. You can select which faction you want to start a job for by shooting the associated shot for that faction to light its insert before you start a job. Play 3 jobs in a game to light **extra ball**.

Center Ramp	Ruska Roma	Yellow	Heist	Shoot lit shots
Right Orbit	Marquis de Gramont	Blue	Gather Intel	Shoot lit ramps
Right Ramp	Tarasov Family	Orange	Task a Crew	Shoot the lit spinner

The final shot for each job is at the left eject shot, and awards 20% of the total score from the completed job along with the job's completion perk described above.

Play a job for all seven factions to light a **wizard mode**.

Detailed rules for each job:

- **Night Watch (Bowery):** All 7 shots are lit purple. Making a shot unlights it, and one roving white shot is lit to score 2x (moving left to right across the lit shots and back). Complete all shots to light the cashout and relight every shot for a second go.
- **Assassination (New York Continental):** Shoot lit green shots to light the captive ball for kill shot. After 5 kill shots (one for every green arrow shot), the cashout is lit.
- **Security Detail (Osaka Continental):** Shoot the single blinking red shot to score; after 7 shots, the left eject will light to finish the Job. The left ramp starts lit, and the

target shot moves one to the right (excluding Red Circle) every time one is made or a Dance Floor target or bumper is hit. Dance Floor shots (targets and bumpers) are marked with a solid red arrow, and will increase the score value for subsequent blinking red shots.

- **VIP Award (High Table):** Two shots are lit white at a time, one solid and one blinking. The blinking shot is a hurry up worth 5M that changes when made, and the solid shot resets the value and moves them one shot to the right of the playfield. Score 6 hurry-ups to light cashout.
- **Heist (Ruska Roma):** Shoot standups to light major shots yellow to score. Hitting the gold coin targets during single-ball play collects all lit shots, and rebounding into them off of the blood marker collects them all at 2x value. Score 6 lit major shots to light cashout.
- **Gather Intel (Marquis de Gramont):** The left, center, and right ramps are lit blue. Combo the left and right ramps to score and increase a jackpot scored at the center ramp (2x if made as a combo) by their respective values. Collect 6 left / right ramp shots to light cashout.
- **Task a Crew (Tarasov Family):** Shoot flashing shots to add 100k to the left orbit spinner value, with the right ramp setting up the spinner for 2x the next award. The spinner is multiplied by any enemies at the left orbit. Rip the lit spinner 4 times to light cashout.

Adversaries:

Defeat 10 **enemies** during single-ball play to light the left eject (the administration shot) for adversary battle. Enemies can still be defeated during multiball modes, but they won't count towards lighting battle.

Adversary battles are 200-second timed modes that can be changed (from left to right) with shots to the left standup targets to change which battle will start. These represent the one-on-one battles from the films, and take priority over all other game features. After enough shots are made during the battle, the blood marker will light to qualify the cashout, or a "Be Seeing You" bonus will be awarded which scores 25M instantly, adds 10M to **end-of-ball bonus**, and awards an **extra ball** the first time this bonus is scored in a game. The 25M award will be doubled if collected during Lights Out.

Each adversary battle features an "escape jackpot" that is built up as lit shots are made but must be collected, and ends the battle once scored. To light the escape jackpot, make enough lit shots (half of the ones required for "Be Seeing You"), then shoot the blood marker to light the left eject. If the player opts to continue the battle at this time, the multiplier for the battle's scoring will increase by +1x to a maximum of 4x.

Once any adversary battle has been played (doesn't have to be completed), the blood marker's obligation will be fulfilled, and ball save will be requalified at the left standup targets if it has been used. If a lit ball save hasn't been used before a battle starts, +30 seconds will be added to the battle's initial ball save timer of 40 seconds.

When the administration light is lit, the selected adversary battle can be toggled via the blood oath standup targets or the pop bumper.

The five adversaries are:

- **Viggo**: Shoot the car or captive ball to light gold shots for bonuses. Blood marker - lit after 6 lit shots (including car, captive ball, and gold shots). "Be Seeing You" - awarded by hitting 12 lit shots.
- **Kirill**: Shoot the flashing red shots, which alternate between left and right and decrease in quantity as they are made, to light the Red Circle for their combined total + 300k, which never resets. Avoiding the Red Circle for an entire shot wave increases the award value by 1M. Blood marker - lit after 6 lit shots. "Be Seeing You" - awarded after 12 lit shots.
- **Cassian**: Switch frenzy mode - everything scores 2.5k and adds 10k to the jackpot. One shot is flashing purple for jackpot, which moves across the playfield as orange targets or pop bumpers are hit. The jackpot increases by 250k every time it is scored but resets when all shots are relit upon hitting 100 switches. Blood marker - lit after 3 jackpots. "Be Seeing You" - awarded after 6 jackpots.
- **Ares**: All shots are lit white to score increasing points, but only one shot is lit red and moves sporadically. The red shot finds Ares and scores 3M + 1.25M for each red shot made, and can be seen for a brief time with pop bumper hits or slingshot hits. Blood marker - lit after 4 red shots.

“Be Seeing You” - awarded after 8 red shots.

- **Zero:** Combo mode. Shoot any light blue shot to score combos, then either the car, captive ball (1x collect), or left eject (2x collect) to complete them for 750k + 100k per combo completed + 250k for each combo shot made prior to collecting. Blood marker - lit after 2 combos completed. “Be Seeing You” - awarded after 4 combos completed.

Play all five adversary battles to qualify a **mini-wizard mode**.

Multiballs:

There are three perks that can be awarded to extend the duration of all multiballs, once per ball-in-play. Only one of these perks can be used per multiball.

- **Multiball Extend:** Awarded from cashing out during **security detail**. This allows all multiballs to be extended if all but one ball drains.
- **Add-A-Ball:** Awarded from cashing out during **task a crew**. This allows the player to add a ball to any multiball by *holding* the action button. If multiball extend hasn't been used on the current ball, then it must be used first before add-a-ball can be used.
- Locking balls for **deconsecrated multiball** before starting another multiball on the Prem / LE model of **John Wick** allows players to **swipe-a-ball** from the lock by pressing the action button, if neither of the above perks have been used yet. The difficulty for lighting the next

deconsecrated multiball locks will increase accordingly.

Multiballs can also have their duration increased by cashing out **night watch**, which adds +5 seconds to multiball ball savers.

Play all 6 multiballs to light a **mini-wizard mode**.

Car Chase Multiballs:

Bash the car to light the left orbit for Car Chase Multiball. On Prem / LE models, the car can be hit from multiple angles and will lock the ball once the multiball starts.

The first multiball requires only two car hits to light, and is 2-ball (3-ball on Prem / LE). Subsequent multiballs add +1 more car hits to qualify, to a maximum of 4 (8 on Prem / LE, one hit for both front-facing and side-facing positions). On the Pro, the car must be lit by ripping the spinner first. Every car multiball played adds another ball to the multiball; after playing all four it resets to the base number +1 ball.

The car jackpot starts at 2M, and pink “award” shots during the multiballs score 20% of the car jackpot. It increases in the following ways:

- Hit the car during single-ball play - adds 20% of the value for the hit (increased with spinner rips)
- Award shots during car multiballs (+5k)
- Jackpots during car multiballs (+50k)
- Super jackpots during car multiballs (+250k)

There are four different Car Chase Multiballs. The game starts with **helipad showdown** lit, but the car multiball changes down the list every time the car is hit before starting it, wrapping around from 4 to 1.

- **Helipad Showdown** (1): Shoot red shots to collect showdown awards and increase the jackpot awarded by hitting the car. Either a single, 2x, 3x, or 4x jackpot can be awarded based on how many “car” inserts are lit (1 additional shot is needed to light each jackpot, so 9 shots are needed for a 4x jackpot). After nine jackpots have been scored (with progress based on the jackpot multiplier), the car can be hit for a super (5x) jackpot, and the left orbit can be shot for a 2x super jackpot.
- **Taxicab Chase** (2): Starts with a 15-second timed hurry-up to hit the car and lock in the hurry-up jackpot value (starting at the built car jackpot award). Shoot sets of lit chase awards to increase (and light) the jackpot at the car; the jackpot multiplier increases with each subsequent jackpot scored, and each jackpot requires one more award to light. After collecting four jackpots, the left orbit lights for a super (5x) jackpot, which can be further increased by bashing the car.
- **Motorcycle Pursuit** (3): Pursuit awards are lit at the Dance Floor and either “left-side” shots (administration, left orbit, and left ramp), or “right-side” shots (center ramp, right orbit, and right ramp). Each shot made increases the car jackpot multiplier up to 4x. Hit the car to switch sides, relight the other side’s shots, and score a

jackpot if at least one pursuit award was collected. After collecting four jackpots, hit the Continental for a super jackpot. On the Premium/LE, the car will block the Continental; bash it to move it out of the way for a few seconds.

- **Bagarre a L'Étoile (4):** Shoot any ramp to light the car for jackpots, and the orbits to increase the jackpot multiplier up to 4x & collect awards. The jackpot must be relit each time it has been scored. After collecting four jackpots, the car is lit to collect four super (5x) jackpots. This is the highest scoring of the four Car Chase multiballs on average.

Excommunicado Multiball:

Shoot the Red Circle bumper and the targets surrounding it to increase the dance floor level. When the level is at max, the next shot to the Red Circle, either directly or through the VIP lane, will start Excommunicado Multiball.

Excommunicado Multiball starts with a 15-second timed single-ball phase, with a ball save, where the player can hit shots to increase the jackpot value during the subsequent multiball (200k per shot, 125k per target). During this phase, orange target hits will add 5 seconds of time. This “build phase” ends when time runs out or the ball drains. *(On the Prem / LE model, short-plunging the ball into the Red Circle will lock balls and increase the super jackpot value - up to four balls can be locked this way).*

Once the timer expires, 2-ballmultiball begins. Hit the gold flashing shots for jackpots and the Red Circle when lit for super jackpot. The shots pan outwards from the center, starting at the left ramp and right ramp, and ending with the left eject and right ramp. The super jackpot lights once all six jackpots have been scored.

The super jackpot starts at $5M + (2.5k \times \text{enemies this game}) + (25k \times \text{enemies this ball}) + (150k \times \text{enemies defeated this mode})$.

Deconsecrated Multiball

Shoot the captive ball under the Continental to spell WINSTON and light the lock at the center ramp (virtual on Pro, physical on Prem / LE). The first multiball only requires three captive ball shots to light all three locks but the difficulty increases over the course of the game. Lock 3 balls there for Deconsecrated Multiball.

During Deconsecrated Multiball, shoot the green shots to score jackpots worth $500k + (75k \times \text{enemies this mode}) + (5k \times \text{enemies this ball}) + (50k \text{ boost from captive ball})$. Hitting the captive ball will increase the super jackpot value by 200k if the super jackpot isn't already lit. The first wave of jackpots can be scored at any shot besides the one that was just made, but subsequent jackpot waves have to be scored at unique shots and only relight once all 7 shots are made.

After scoring 7 jackpots (14 jackpots for 3rd+ super jackpot

phases), shoot the captive ball to start the super jackpot phase. For the next 15 seconds, the captive ball will score repeated super jackpots worth $2.5M + (2.5k \times \text{enemies this game}) + (25k \times \text{enemies this ball}) + (250k \times \text{enemies this mode})$. Once the phase ends, the player will return to scoring jackpots to relight the captive ball for super jackpots.

Other Scoring:

Enemies:

“Enemies” are represented by the blue lit circles in front of each major shot. They have two functions: (1) they serve as a shot multiplier when the corresponding shot is lit during **Jobs** and **Multiballs**; and (2) they qualify **Adversary Battles**.

Each ball starts with a minimum of 5 enemies. Enemies are created (“spawned”) after scoring 50 switch hits, with the following rules:

- **MXV skill shot:** 10 enemies are added to the next spawn on this ball.
- **Spinner:** Every 3 spinner spins count as 1 switch hit.
- **Red Circle:** Every target or bumper hit counts as 4 switch hits.
- **Orange targets:** 3 targets count as 1 additional switch hit during multiball. Each target hit during single-ball play qualifies 1 enemy (3 target hits per enemy during multiball).

A “phone ring” sound accompanies each spawn during play, and all of the blue circles on the playfield will briefly flash. The initial placement of enemies is partially random, but may be influenced by player performance during the game and based on what shots are currently lit to score the highest points.

Enemies act as shot multipliers during **Jobs** and **Multiballs** for the shots they’re placed in front of (each lit blue circle corresponds to +1x shot multiplier, up to the maximum of 3 enemies, which is a 4x multiplier for that shot). When the shot is made, the enemy is “defeated,” and is no longer lit.

Defeating enemies also increases the shot values during **Jobs** and **Multiballs** by substantial amounts on the same ball, and lower amounts over the course of the game.

During single-ball play, defeating a total of 10 enemies will qualify the next **Adversary Battle**. This rule is disabled during multiball play.

Defeat 10 enemies during either single-ball *or* multiball play to light **extra ball**.

Allies:

The Ally system’s purpose is to help manipulate the location of **enemies**. Shoot the **gold coin targets** while no modes are running to qualify allies. Only one ally can be used per job; once all three have been used, the player can use them again.

The three allies are:

- **Akira:** Shooting the left ramp allows the player to rotate enemies one shot to the right of their current position, wrapping around to the left eject if they are at the right ramp. Holding in the left flipper while shooting the left ramp rotates enemies one shot to the left instead.
- **Charon:** Shooting the center ramp starts a 4-second hurry-up, during which the next set of enemies defeated will immediately replenish. The player gets credit for defeating the enemies and any applicable shot multiplier, but the enemies will remain active at that shot to allow for another chance to score a multiplied shot value. Enemies about to be impacted by Charon flash instead of being lit solid.
- **Katia:** Shooting the right ramp moves enemies to different shots, taking enemies from shots that are not presently lit for scoring and placing them on shots that are available for scoring in the present **Job** or **Multiball**. There is a left-to-right bias in the assignment of new locations, except for the scoop, which is not prioritized.

Lights Out / Motion Sensors:

Spell YAGA to light the action button to enable Lights Out, by cycling the lit inlanes - you can only collect YAGA letters if spotted at a lane where an insert in BABA is already lit.

Lights Out turns off a majority of the playfield lighting (excluding inlanes / outlanes, the blood marker, and the shoot again insert), but doubles all scoring for 30 seconds (+20

seconds if the **gather intel** job was cashed out).

If the player was able to cash out the **heist** job mode successfully (shooting the center ramp to qualify Ruska Roma before shooting the crate), **motion sensors** can be used by pressing the action button during Lights Out. Motion sensors briefly relight the playfield and recharge 5 seconds after they are used.

Lights Out remains lit across balls if it isn't used but progress towards spelling YAGA resets at the end of every ball.

Gold Coins:

Bounces into the gold coin targets (above the weapons crate) light random shots for gold coins, or increase the coin value if they are already lit. The coin value starts at 10k and only one shot can be lit for a gold coin at a time. Gold coins add 1M to **end-of-ball bonus**, and scoring 10 gold coins over the course of a game lights **extra ball**.

Gold coin target hits also light **allies** when the player isn't in a mode, and collect all lit mode shots during the **heist job mode** (but only during single-ball play).

Marker Ball Save:

Hit any of the left standup targets 5 times (+2 times per ball save lit) to light an outlane for marker ball save. The flashing outlane can be changed by pressing the flippers. If a ball save

is already lit, the targets will add to the value. Ball save can be re-qualified by playing an **adversary battle** to fulfill the blood marker's obligation.

If a ball save has been used before the player starts an **adversary battle**, the player will be given +10 seconds of ball save time during the battle. The outlane ball save cannot be used during battles.

If the player was able to cash out the **assassination** job mode successfully, both outlanes will be lit to award marker ball saves instead of just one.

Extra Balls:

Extra ball is lit at the left eject after:

- Defeating 10 **enemies**
- Starting three **jobs**
- Instantly awarded after scoring the first **Be Seeing You** bonus of a game
- Collecting 10 **gold coins**
- Instantly awarded after completing **Red Circle Reckoning** mini-wizard mode
- Starting a user-defined number of car multiballs (disabled on default settings)

Extra balls score 10M if disabled. The compensation score is multiplied by **Lights Out** but not by enemies.

End-of-Ball Bonus:

End-of-ball bonus is determined by the following:

- A small base bonus
- 1M per **job started**
- 2M per **adversary battle started**
- 10M per **Be Seeing You** scored during adversary battles
- 1M per **gold coin**
- 10k per combo

All multiplied by the bonus multiplier which increases as BABA is spelled at the inlanes. The bonus multiplier caps out at 5x, and if the **escort the VIP** job mode was cashed out, the bonus multiplier starts each ball at 2x.

Wizard Modes:

Light wizard modes at the left eject and the crate by completing all of any task in the game:

- Playing all 7 **jobs**
- Playing all 5 **adversary battles**
- Playing all 6 **multiballs**

Red Circle Reckoning is unique among the wizard modes.

The player only needs to start one job, one battle, and one of each multiball type (car, Deconsecrated and Excommunicado) to light it.

The second, third, and final wizard modes are lit once all of one

task are completed.

The wizard modes are played in the same order every game, as listed below.

*Note: **Lights Out** cannot be used during any wizard mode except Red Circle Reckoning.*

Red Circle Reckoning (Mini-Wizard Mode):

The easiest of the four mini-wizard modes to reach, Red Circle Reckoning is a 60-second timed 4-ball multiball where the player must clear every shot for 10M each, with a final shot at the Red Circle worth 30M, ending the mode, and awarding an **extra ball**.

Collecting enough switch hits in the Red Circle bumper area will add 10 seconds to the mode. A bonus is awarded of 1M per second remaining when the player makes the final Red Circle shot.

Lights Out can double any scoring in the mode, including the final shot and time bonus.

The Staircase (Wizard Mode 1):

This is a three-level wizard mode. Ascend the staircase and defeat the enemies on each level! There is a lengthy ball save at the beginning of the mode.

- Level 1: left ramp & right ramp are lit with one enemy

each

- Level 2: left orbit, left ramp, right orbit & right ramp are lit with 2 enemies
- Level 3: all 6 major shots excluding center ramp are lit with 3 enemies

Making the lit enemies shot at each level, scores 5M per shot, and lights a white arrow at that shot. Defeating all of the enemies on a level will light the center ramp for a completion bonus of 20M / 20M / 40M point base value. If you collect the white arrow shots after defeating the enemies, you earn a +1 multiplier to the completion bonus for each arrow shot (maximum +2/+4/+6, as you can only collect the arrow shots once per level). Maximum completion bonus scoring is:

- Level 1: $20m \times 3 = 60m$
- Level 2: $20m \times 5 = 100m$
- Level 3: $40m \times 7 = 280m$

Shooting the center ramp to finish level 3 will start the final part of the mode where Wick & Caine have to fight all the way back to the top of the stairs. This repeats the first three levels of the mode, but as a 2-ball multiball, and hitting the center ramp at the end of level 3 will complete the mini-wizard mode and send a new ball to the plunger.

The Duel (Wizard Mode 2):

This is a three-level wizard mode that starts as 2-ball multiball and has a lengthy ball save at the start of the mode. The goal

of the mode is to keep both balls in play for as long as possible to double the scores for every shot.

The player must first hit the Red Circle, then the left & center ramps, then the left orbit & right ramp, before locking the two balls at both the left eject and crate within 10 seconds of each other. All shots on this mode are on a hurry-up timer: the first shot of each level starts at 5M, the next four shots start at 10M, and the final two shots start at 15M (but only if the player locks both balls in time).

Once the player locks the two balls, the player must press the action button at the right time as Caine and Wick fire at each other. The timing of the crosshair on the display indicates when the player can score the maximum points from the action button, up to 25M for a perfectly timed press (dead center). The scoring opportunity times out after about 5 seconds.

Repeat this sequence 3 times to light the final four shots at the left eject, Red Circle, right orbit, and crate: the first three starting at 25M and the final one awarding 50M & completing the mode.

As mentioned, if the player keeps both balls in play throughout the entirety of the mode, all scores from the mode are doubled.

Special Assignment (Final Wizard Mode):

Special Assignment is the final mode of the game. Once the player completes it, either by making all of the required shots

or by running out of flips, the game automatically ends awarding **end-of-ball bonus** one last time in the process.

This mode is a single-ball limited flip mode where Wick must finally defeat Viggo's son, Iosef. Starting with 60 flips, the player must clear out enemies at all major shots with shots to them in the following order:

- Right orbit (3x)
- Left and right ramps (3x each)
- Left orbit (3x)
- Center ramp (3x)
- Red Circle (3x)
- Left eject (3x)

Every enemy defeated scores 10M. Comboing lit shots scores 2x the value, every enemy killed adds 6 flips, and draining the ball removes 5 flips.

Once all enemies are defeated, all shots will light for a chance to find and kill Iosef. He will be hiding at one of the shots, chosen at random, and no more flips can be added during this phase, only lost. Defeating Iosef scores the total value of all prior shots, completes the mode and ends the game, awarding 10M per flip remaining at the time the mode was completed.

@CaptainBZarre , looks like I can't edit this rulesheet like I can the others. Can you open it up to everyone to make edits?

Edit:

Can someone wiki this post so we can all add edits? @joe can you help with this?
